

erwin® Evolve Web Modeler

AT A GLANCE

erwin Evolve Web Modeler is part of the erwin Evolve enterprise architecture (EA) and business process (BP) modeling and analysis suite. It is an integrated, web-based, fully functional modeler, enabling new EA/BP diagrams to be created from scratch or existing ones to be updated.

KEY BENEFITS/RESULTS

- Quickly and easily create and update all types of EA/BP diagrams directly from the erwin Evolve Web Platform.
- Open up EA/BP diagramming to new user communities, particularly business users.
- Enable enterprise collaboration in real time.
- Experiment before validating and publishing models with the drafting capability.
- Increase adoption of erwin Evolve for EA/BP modeling and analysis for better decision-making.

WHY DO ORGANIZATIONS NEED ERWIN EVOLVE WEB MODELER?

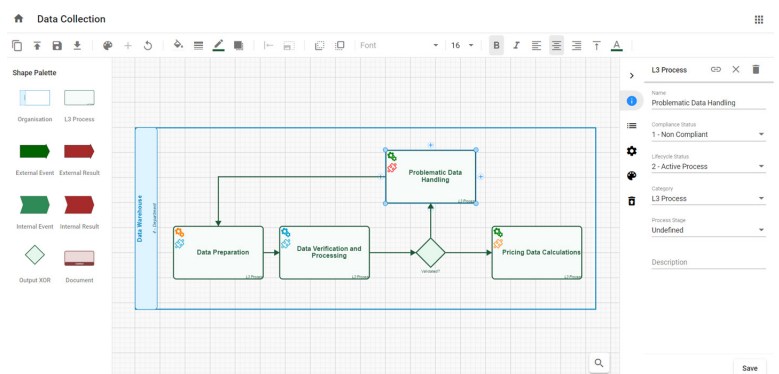

Collaboration across business and technology architectures is key to breaking down organizational and technical silos to achieve the desired outcomes. erwin Evolve Web Modeler enables IT and business stakeholders to create, edit and collaborate on diagrams through a user-friendly interface that makes it easy to participate in EA/BP modeling, planning, design and deployment.

SOLUTION OVERVIEW

Harmonize EA/BP capabilities with a robust, flexible, web-based modeling and diagramming interface that is easy for all stakeholders to use. erwin Evolve Web Modeler's key features include:

- **Fast adoption** – The user interface (UI) is highly intuitive and easy to use, so adoption is fast with minimal training.
- **Real-time diagramming and collaboration** – Work with others simultaneously to create new or update existing EA/BP diagrams. See exactly who's connected and working on a diagram.
- **Automated graphical indicators** – User-defined indicators automatically model information on diagrams for quick and intuitive visual analysis.
- **Diagram drafts** – Safely experiment and get your drafts reviewed before publishing them.
- **Asset reuse** – Access and reuse existing EA/BP assets, such as processes and applications from the repository.
- **Process modeling** – Swimlane diagrams drawing assistant accelerates productivity and relationships between processes and swimlanes are built automatically.
- **BPMN support** – BPMN and other process notations are fully supported.
- **Access rights** – erwin Web Modeler enforces the access rights defined in erwin Evolve.

The erwin Evolve Web Modeler UI is highly intuitive, making adoption of erwin Evolve fast and easy for both IT and business users for better decision-making across the organization.
